Clarity frame

Five check fields against the five misframings. Own tool by Steffen Herr, herrlichconsultegyzer.de/problem-framing/

1

Observation

What is happening, if you are not allowed to name a solution?

checks against: A solution disguised as a problem

2

Is / is not

Where does it show, and where, in a comparable place, does it not?

checks against: Symptom instead of cause

3

Boundary

What belongs to it, and what explicitly does not?

checks against: Problem too big

4

Owner

Who has the problem, who decides, who is missing at the table?

checks against: Wrong owner

5

Measure

How will you see in 90 days that the problem has become smaller?

checks against: Goal without a measure

Check sentence

[Owner] has the problem that [observation], above all [is], but not [is not]. It is solved when [measure] by [date]. Not part of it: [boundary].
